Application for Développeur Logiciel Applicatif Python Senior at Triskell Consulting

Dear Hiring Manager,

I am applying for the Développeur Logiciel Applicatif Python Senior role at Triskell Consulting, where I can utilize my skills in designing reliable automated systems that leverage AI. The company's focus on developing software solutions using Python, FastAPI, and GitLab aligns with my technical background and interests.

Triskell Consulting's work with Python, FastAPI, GitLab, and SonarQube is particularly relevant to my experience as an AI Engineer Intern, where I architected an orchestrated multi-agent system with AI agents and an LLM judge. My experience with industrializing pipelines as REST API and integrating computer vision for component segmentation can be valuable in Triskell Consulting's software development projects. The company's commitment to performance environnementale, Épanouissement au travail, and Diversité et inclusion also suggests a work environment that prioritizes growth and collaboration.

As a Tunisian software engineer, I am available to relocate to Saclay, France for this CDI contract, drawn by France's position as a hub for IT industry and regulatory leadership. My goal is to design solutions that replace manual work with reliable, orchestrated, and secure automated systems, and I believe Triskell Consulting's expertise in software development can provide me with the right environment to achieve this. I am asking to join the company as a Développeur Logiciel Applicatif Python Senior, where I can contribute my skills and experience to the team and grow as a professional.

Sincerely,

Chedy Chaaben
