Application for Junior / Intermediate Machine Learning Engineer at Doctrine

Dear Hiring Manager,

I am applying for the Junior / Intermediate Machine Learning Engineer role at Doctrine, a company that has developed Europe's leading legal AI platform, working with technologies such as Python and GitHub. Doctrine's focus on using Machine Learning and NLP to challenge the status quo in the legal industry is particularly interesting to me. The company's commitment to releasing early and often, and listening to customers, suggests a dynamic and customer-centric approach to product development.

The work that Doctrine does in the legal tech industry, using Machine Learning and NLP to improve legal processes, is closely related to my own experience and interests. For example, in my role as an AI Engineer Intern at KPIT Technologies, I designed an autonomous information system for visual QA of web interfaces using Machine Learning and Python. This project required me to architect an orchestrated multi-agent system, and automate the detection of visual anomalies using Computer Vision and Machine Learning. The skills and knowledge I gained from this experience are highly relevant to the work that Doctrine does.

I am looking to relocate to Paris for a CDI contract, and I believe that my skills and experience make me a strong candidate for this role. My background in software engineering, and my experience with Machine Learning, NLP, and Python, align with the requirements of the position. I am looking for a company where I can apply my skills and knowledge to contribute to the development of innovative products, and where I can continue to learn and grow as a professional. I am asking Doctrine to consider my application for the Junior / Intermediate Machine Learning Engineer role, and I am looking forward to the opportunity to discuss my qualifications further.

Sincerely,

Chedy Chaaben
