Application for Solution Architect - LangGraph & Agentic AI at Belmont Lavan Ltd

Dear Hiring Manager,

I am applying for the Solution Architect - LangGraph & Agentic AI role at Belmont Lavan Ltd, where I can utilize my skills in AI architecture and solution architecture to contribute to the development of LangGraph-based AI solutions. The company's work in building and deploying these solutions, using technologies such as AWS, Azure, and GCP, aligns with my interests and experience in cloud engineering and security.

The company's focus on innovation and teamwork, particularly in the field of AI, is what drew me to this role. The fact that they work with LangGraph and Agentic AI, and utilize Python, suggests a commitment to staying at the forefront of technology, which is something I am eager to be a part of. My experience in developing automated systems, utilizing Python and FastAPI, and my work in data infrastructure development and NLP systems, have prepared me to contribute to the company's efforts in solution architecture and AI architecture.

As a software engineer with experience in developing automated systems and AI solutions, I am confident in my ability to work effectively in a distributed team, and I am comfortable with the idea of working remotely from Tunisia, with an overlap with the team's timezone in France. I am available to relocate if the role evolves, but my primary focus is on contributing to the company's success in the field of AI and solution architecture, and I believe my skills and experience make me a strong fit for this role. I am seeking a cloud engineering role that utilizes LangGraph and Agentic AI, and I believe this position at Belmont Lavan Ltd is the right fit for me.

Sincerely,

Chedy Chaaben
