Application for Backend Developer at Bjak

Dear Hiring Manager,

I am applying for the Backend Developer role at Bjak, where I can utilize my skills in backend engineering to contribute to the development of innovative financial applications. The company's focus on redefining financial applications and its passion for building great products resonates with my own goals as a software engineer. I am particularly drawn to the AI Neobank app and insurance platform, which aligns with my interest in designing solutions that replace manual work with reliable and secure automated systems.

The work that Bjak does in the FinTech industry, specifically in payments, is what initially caught my attention. The company's expertise in building great products, such as the AI Neobank app and insurance platform, demonstrates a deep understanding of the industry's needs and a commitment to delivering high-quality solutions. My experience in architecting and industrializing pipelines, as well as building and normalizing datasets, could be valuable assets to the team. For instance, my experience in designing a REST API integrating computer vision for component segmentation could be applied to Bjak's work in developing innovative financial applications.

As a recently graduated software engineer from Tunisia, I am now ready to start my career and am looking for a role that will allow me to grow professionally. I am comfortable working in a distributed team and am aware that the team is based in Germany, but I am confident that my working hours can overlap with the team's timezone, ensuring seamless collaboration. I am looking for a company like Bjak, where I can bring my skills and experience to contribute to the development of innovative financial applications, and I believe that my background and skills make me a strong candidate for the Backend Developer role.

Sincerely,

Chedy Chaaben
