Application for Consultant Débutant Data Engineer F/H at KPMG Tunisie

Dear Hiring Manager,

I am applying for the Consultant Débutant Data Engineer F/H role at KPMG Tunisie, where I can utilize my skills in data analytics and machine learning to drive business growth. The company's focus on data engineering, data analytics, and big data resonates with my experience and interests. KPMG Tunisie's services in data and artificial intelligence consulting align with my goals, and I am eager to contribute to projects that involve working with cutting-edge technologies.

KPMG Tunisie's work in data and artificial intelligence consulting is what drew me to this role, particularly the company's emphasis on providing services that help clients make informed decisions. The fact that KPMG Tunisie offers a multicultural environment and opportunities to work on large-scale projects also appeals to me. In my previous roles, I have worked on developing autonomous systems, designing solutions that replace manual work with automated systems, and integrating artificial intelligence to accelerate problem-solving. For instance, as an AI Engineer Intern at KPIT Technologies, I developed a REST API that integrated computer vision for component segmentation, handling over 500 interface screenshots and automating the detection of visual anomalies.

I am now looking to apply my data analytics and machine learning skills in a consulting environment, where I can work with tools like FastAPI, SSIS, and ReactJS. With my experience in developing business intelligence systems, building decision-support information systems, and creating automated validation and consolidation of incoming data, I believe I can make a valuable contribution to KPMG Tunisie's team. I am asking to join the company as a Consultant Débutant Data Engineer F/H, where I can utilize my skills and experience to drive business growth and contribute to the company's mission.

Sincerely,

Chedy Chaaben
