Application for AI Software Engineer at a fast-growing Belgian start-up

Dear Hiring Manager,

I am applying for the AI Software Engineer role at a fast-growing Belgian start-up, where I can utilize my skills in AI systems and Python to drive financial software integrations. The company's focus on AI, software engineering, and financial software integrations aligns with my interests and experience. I am drawn to the opportunity to work with a company that is pushing the boundaries of what is possible with AI and Agentic workflows.

The company's work in financial software integrations, using technologies such as Python, SQL, and Docker, is particularly interesting to me. My experience in building and working with AI systems, including my work on an orchestrated multi-agent system and a chain for continuous web scraping, has given me a strong foundation in the skills required for this role. I am impressed by the company's use of PostgreSQL and MySQL, and I am excited about the opportunity to work with these databases and learn from the CTO.

I am looking to relocate to Brussels for this role, and I am excited about the opportunity to join a fast-growing company that values flexible working hours and a mix of office and remote work. My experience has taught me the importance of reliable, orchestrated, and secure automated systems, and I am eager to bring my skills and experience to a company that is driving innovation in the FinTech industry. I am asking to be considered for the AI Software Engineer role at this Belgian start-up, where I can utilize my skills and experience to contribute to the company's mission and growth.

Sincerely,

Chedy Chaaben
