Application for Ingénieur Logiciel, Outils de Développement & Infrastructure CI/CD at Dassault Systèmes

Dear Hiring Manager,

I am applying for the Ingénieur Logiciel, Outils de Développement & Infrastructure CI/CD role at Dassault Systèmes, where I can utilize my skills in software development and artificial intelligence to contribute to the company's innovative solutions. Dassault Systèmes' position as a leading editor of software for design and simulation, and its commitment to innovation and diversity, make it an attractive company to join.

Dassault Systèmes works with a range of technologies, including Python, Java, Shell, and Docker, which are also central to my own experience and interests. The company's focus on software development, CI/CD, infrastructure, and development tools aligns with my background in designing automated systems and implementing artificial intelligence to replace manual work. My experience in developing software and testing infrastructure, as well as my work on an autonomous information system for visual QA of web interfaces, demonstrate my ability to contribute to the company's goals.

As a software engineer available to relocate, I am looking to start my career abroad, and France's position as a hub for the industry, with companies like Dassault Systèmes leading the way, makes it an ideal location for me. With my recent intern experience in software development and business intelligence, I am confident that I can bring value to the company. I am asking to join Dassault Systèmes as an Ingénieur Logiciel, Outils de Développement & Infrastructure CI/CD, where I can apply my skills and experience to contribute to the company's innovative solutions and continue to grow as a professional.

Sincerely,

Chedy Chaaben
