Application for Staff Backend Engineer, Integrations at Vibe

Dear Hiring Manager,

I am applying for the Staff Backend Engineer, Integrations role at Vibe, where I can utilize my technical skills to contribute to the development of their Audience First Streaming TV Advertising platform. The company's focus on AdTech and use of technologies such as TypeScript, AWS, and Terraform aligns with my interests and experience. I am drawn to Vibe's industry and the impact they aim to make.

Vibe's work on the Audience First Streaming TV Advertising platform, which includes AI-powered recommendations, is particularly appealing to me. The use of TypeScript, AWS, and Terraform in their tech stack also resonates with my experience and skills. In my previous internship at KPIT Technologies, I developed an autonomous information system for visual QA of web interfaces, integrating computer vision and machine learning, which resulted in 100% automation of defect detection. This experience has given me a strong foundation in designing and implementing reliable automated systems.

I am now looking to bring my skills and experience to a new challenge, and the Staff Backend Engineer, Integrations role at Vibe presents an exciting opportunity. With my recent graduation and availability to relocate, I am eager to join a team where I can apply my knowledge and skills to make a meaningful impact. I am asking to be considered for this role, where I can contribute to the development of Vibe's platform and continue to grow as a software engineer, and I am prepared to relocate to Paris for this position.

Sincerely,

Chedy Chaaben
