Application for Staff Backend Engineer, Integrations at Vibe

Dear Hiring Manager,

I am applying for the Staff Backend Engineer, Integrations role at Vibe, where I can utilize my technical skills to contribute to the development of their Audience First Streaming TV Advertising platform. The role at Vibe, with its focus on building production backend systems, aligns with my interests and experience in technical system development.

The work that Vibe does in AdTech, using TypeScript, AWS, and Terraform, to provide AI-powered recommendations, is of particular interest to me. Their platform, which works with various technologies to provide impact and results-oriented solutions, resonates with my own approach to problem-solving, where I lean on the most recent and most effective methods available. I am drawn to the fact that Vibe's platform is designed to make a significant impact, and I believe my skills and experience can help contribute to that effort.

I am now looking to bring my skills and experience to a new challenge, and I believe the Staff Backend Engineer, Integrations role at Vibe is the right opportunity for me. With my background in technical system development, automated solutions, and artificial intelligence accelerators, I am confident that I can make a valuable contribution to the team. I am available to relocate to Paris and start working in a hybrid mode, and I am looking forward to discussing how my skills and experience align with the requirements of the role.

Sincerely,

Chedy Chaaben
