Application for Junior Software Engineer (AI-Native) at Labeless (Bytes & Pixels GmbH)

Dear Hiring Manager,

I am applying for the Junior Software Engineer (AI-Native) role at Labeless (Bytes & Pixels GmbH), a company that develops software for clients and its own digital products, including mobile AI apps and a skincare brand. The company's focus on innovation and its use of technologies such as TypeScript, React, and Node.js align with my interests and skills. Labeless's fast-paced environment and emphasis on ownership also appeal to me as a software engineer looking to make a meaningful contribution.

The work that Labeless does, particularly in the area of AI development, is what draws me to this company. The fact that they build software for clients and own digital products, and that they work with AI development tools, suggests that they are committed to staying at the forefront of technology. My experience as an AI Engineer Intern at KPIT Technologies, where I developed a visual QA platform and built a REST API integrating computer vision, has given me a strong foundation in AI development and a desire to continue working in this field. I am impressed by Labeless's ability to innovate and its focus on using technology to solve real-world problems.

I am now looking to relocate to Munich and join a company where I can apply my skills and experience to contribute to the development of AI-native software. With my background in autonomous systems development, computer vision, and machine learning, I believe I would be a strong fit for this role. I am available to start onsite and am excited about the opportunity to work with Labeless's team to develop innovative software solutions. I am asking to be considered for this position, where I can bring my skills and experience to contribute to the company's success.

Sincerely,

Chedy Chaaben
