Application for Software Development Engineers in Test (Python) at Xm

Dear Hiring Manager,

I am applying for the Software Development Engineers in Test (Python) role at Xm, where I can utilize my skills in quality assurance and test automation to contribute to the development of Forex brokerage core. The role at Xm stands out to me because of the company's work in FinTech and its use of cutting-edge technologies such as Python, Kafka, and AWS.

Xm's focus on designing and developing automated tests using Python aligns with my experience in testing REST API and my proficiency in Git. My background in software engineering has equipped me with strong hands-on experience in test automation and agile software development methodologies. I am drawn to Xm's intellectually stimulating work environment and the opportunities for continuous personal development and international training. As someone who has worked effectively in remote settings, I believe my habits of async communication and written-first culture will enable me to collaborate seamlessly with the team.

I am looking to bring my expertise in Python and quality assurance to a role where I can design and develop automated tests, and contribute to agile software development methodologies. With my recent graduation and experience in software engineering, I am ready to start working on complex problems and contributing to the development of reliable and secure automated systems. I am applying for this role because it offers the chance to work on test automation and contribute to the development of Forex brokerage core, and I believe my skills and experience make me a strong fit for this position, which I can perform remotely from Tunisia.

Sincerely,

Chedy Chaaben
