Application for AI Application Engineer - LangGraph & Agentic AI at Belmont Lavan Ltd

Dear Hiring Manager,

I am applying for the AI Application Engineer - LangGraph & Agentic AI role at Belmont Lavan Ltd, where the company develops and implements AI solutions, working with technologies such as LangGraph, LLM, RAG, Cloud platforms, Python, APIs, Databases, and Enterprise systems. The role aligns with my background in AI engineering and autonomous systems development, which I believe would be a valuable asset to the team. I am drawn to the company's focus on innovation, collaboration, and customer satisfaction, which are essential in delivering effective AI solutions.

The company's work with AI solutions, particularly with LangGraph and Agentic AI, resonates with my experience in integrating AI applications with APIs, databases, and cloud platforms, using Python and machine learning. My experience in autonomous systems development for QA has earned me expertise in designing and implementing automated systems that replace manual work, which I believe would be beneficial in this role. I am confident that my skills in computer vision and LLM orchestration would be a good fit for the company's work in AI solutions.

I am available to work remotely and am comfortable with distributed work, given my experience working on projects that involve overlap with different time zones. I am looking to integrate AI applications with APIs, databases, and cloud platforms, and I believe this role would provide me with the opportunity to do so. I am asking to be considered for this position, where I can utilize my skills in AI engineering and contribute to the company's innovative work in AI solutions, with the possibility of visiting or relocating to France if the role evolves, and I am ready to start working with Belmont Lavan Ltd as soon as possible.

Sincerely,

Chedy Chaaben
