Application for Staff Backend Engineer, Integrations at Vibe

Dear Hiring Manager,

I am applying for the Staff Backend Engineer, Integrations role at Vibe, where I can utilize my skills to contribute to the development of the Audience First Streaming TV Advertising platform. Vibe's emphasis on building a platform that works with TypeScript, AWS, and Terraform aligns with my experience and interests. The company's focus on impact, ambition, urgency, ownership, and results-oriented approach resonates with my own approach to problem-solving.

Vibe's work in AdTech, particularly with AI-powered recommendations, is what drew my attention to this role. The fact that they work with TypeScript, AWS, and Terraform to build their platform is a key aspect that I find compelling. My experience in designing solutions that replace manual work with reliable, orchestrated, and secure automated systems can be valuable in this context. For instance, during my internship at KPIT Technologies, I developed an autonomous information system for visual QA of web interfaces, which integrated computer vision and machine learning to automate defect detection.

I am now looking to bring my skills and experience to a new challenge, and the Staff Backend Engineer, Integrations role at Vibe presents an opportunity for me to do so. I am available to relocate to Paris and am eager to contribute to the development of Vibe's platform. With my background in technical system development, automated solutions, and artificial intelligence accelerators, I believe I can make a meaningful contribution to the team. I am asking to be considered for this role, where I can apply my skills and experience to help Vibe achieve its goals.

Sincerely,

Chedy Chaaben
