## Application for Staff Backend Engineer, Integrations at Vibe

---

Dear Hiring Manager,

I am applying for the Staff Backend Engineer, Integrations role at Vibe, a company that builds an Audience First Streaming TV Advertising platform, utilizing technologies such as TypeScript, AWS, and Terraform. This role aligns with my background in software development, particularly my experience with AI-powered solutions. Vibe's focus on AdTech and its commitment to using cutting-edge technologies like AI-powered recommendations resonates with my own interests in designing automated systems.

The work involved in building and maintaining such a platform, particularly the integration aspects, requires a deep understanding of production backend systems and the ability to leverage technologies like TypeScript, AWS, and Terraform. My experience as an AI Engineer Intern, where I developed an autonomous information system for visual QA of web interfaces, integrating computer vision and machine learning, demonstrates my ability to design and implement complex technical systems. This experience, combined with my projects such as AlumniConnect and CarCompare, showcases my capability to develop and integrate various systems, which could be beneficial in the integrations role at Vibe.

I am now looking to relocate from Sfax, Tunisia, and bring my skills in automated solutions and artificial intelligence accelerators to a new role. My goal is to join a team where I can apply my knowledge to replace manual work with reliable systems. The Staff Backend Engineer, Integrations position at Vibe, with its emphasis on innovative technologies and problem-solving, aligns with my career aspirations. I am asking to be considered for this role, where I can utilize my skills and experience to contribute to the development and integration of Vibe's platform, and I am available to discuss how my background fits the requirements of the position.

Sincerely,

Chedy Chaaben
