Application for Fullstack Developer at p.AI

Dear Hiring Manager,

I am applying for the Fullstack Developer role at p.AI, where I can utilize my skills in React, Typescript, and Django to contribute to the development of automation and artificial intelligence solutions. The company's focus on original thinking, adaptability, and innovative solutions resonates with my approach to designing solutions that replace manual work with reliable and secure automated systems.

p.AI's work in the artificial intelligence industry, particularly with tools like PyCharm Professional, PostgreSQL, Docker, and GitHub, aligns with my interests and skills. I am drawn to the company's expertise in creating innovative solutions, and I believe my experience in designing and implementing automated systems can be an asset to the team. As someone who has worked effectively in remote settings, I appreciate the company's embrace of remote work and believe my habits of async communication and written-first culture can facilitate collaboration.

As a recently graduated software engineer from Tunisia, I am eager to start my career as a Fullstack Developer in a fully remote role. My experience in designing solutions that incorporate artificial intelligence as an accelerator has prepared me to work on projects that require autonomous systems and reliable automation. I am asking to join p.AI as a Fullstack Developer, where I can work on automation and artificial intelligence solutions using React, Typescript, and Django, and contribute to the company's mission to create innovative solutions.

Sincerely,

Chedy Chaaben
