Application for Senior/Staff Frontend Engineer (React) at Qonto

Dear Hiring Manager,

I am applying for the Senior/Staff Frontend Engineer (React) role at Qonto, a company that is building Europe's leading finance workspace with banking at its core, augmented by financial tools. Qonto's use of AI and focus on customer satisfaction are key aspects of their work, and I am interested in being a part of this effort. The company's merit-based hiring approach and emphasis on diversity also align with my own values.

Qonto's work in the FinTech industry, particularly in the development of financial tools and their use of AI, is what draws me to this role. The company's goal of creating a comprehensive finance workspace is ambitious, and I believe my skills and experience make me a strong candidate to contribute to this effort. As someone who has worked on developing web platforms with CRUD functionality using ReactJS and MongoDB, I am confident in my ability to work effectively in this area.

As a full stack developer with experience in software development and AI solutions, I am seeking a frontend engineering role in the FinTech industry where I can utilize my skills in React, GraphQL, and AWS. Having developed solutions that replace manual work with automated systems, I am eager to bring my expertise to a company like Qonto, where I can continue to grow and develop as a professional, and I am available to work remotely from Sfax, Tunisia, with a strong foundation in async communication and written-first culture, which I believe will enable me to work effectively with the team.

Sincerely,

Chedy Chaaben
