Application for Software Developer - Stage at Odoo

Dear Hiring Manager,

I am applying for the Software Developer - Stage role at Odoo, where I can utilize my skills in Python, JavaScript, and other programming languages to contribute to the development of open-source integrated business apps. The company's focus on software development, open-source technology, and research and development aligns with my interests and goals. Odoo's reputation in the field of B2B SaaS and its commitment to innovation and teamwork also appeal to me.

Odoo's work with Python, JavaScript, PostgreSQL, and GitHub is particularly interesting to me, given my experience with Python, SQLite, and Qdrant. I am drawn to the company's emphasis on software development and research, as well as its commitment to open-source technology. The fact that Odoo's apps are used by businesses to streamline their operations and improve efficiency is also a significant factor in my application. My own experience in developing a platform that automated the onboarding of banking partners for a mobile money service has shown me the potential of technology to solve real-world problems, and I believe that Odoo's work in this area is essential.

Belgium's position as a hub for technology and innovation, with companies like Odoo leading the way in software development, makes it an attractive location for me to pursue my career goals. I am seeking an internship in R&D where I can apply my AI skills in business apps and research, and I believe that Odoo's Software Developer - Stage role would be a good fit for me. With my expertise in Computer Vision and natural language query, I am confident that I can make a valuable contribution to the company's projects, and I am available to relocate to Belgium for this opportunity.

Sincerely,

Chehin Chaaben
