Application for Product Engineer at Relex

Dear Hiring Manager,

I am applying for the Product Engineer role at Relex, where I can utilize my skills in AI and system integration to contribute to the development of a unified supply chain planning platform for retailers and manufacturers. The company's focus on using AI technology and DevOps to improve the supply chain planning process aligns with my interests and experience. I am drawn to Relex's approach to integrating AI into everyday work and its emphasis on UX and system integration.

Relex's work on a unified supply chain planning platform is impressive, and I appreciate the complexity of the problems they are trying to solve. The platform's ability to help retailers and manufacturers streamline their supply chain operations is a compelling challenge. My experience in designing and developing autonomous information systems, such as the one I built during my internship at KPIT Technologies, has given me a deep understanding of the importance of reliable and secure automated systems. I believe my skills in AI, computer vision, and ETL pipelines can be valuable assets to the Relex team.

As a software engineer with a background in AI and system integration, I am seeking a role that will allow me to apply my skills to real-world problems. I am available to relocate to Lille or Paris and am excited about the opportunity to work onsite with the Relex team. My goal is to leverage my experience and skills to contribute to the development of innovative solutions that can make a significant impact. I am asking to be considered for the Product Engineer role at Relex, where I can apply my skills and experience to help drive the company's mission forward.

Sincerely,

Chedy Chaaben
